

Chick-A-Dee McIntosh: A New Spur-Type Strain

WILLIAM C. OLIEN¹

'Chick-A-Dee McIntosh' is a promising, new spur-type strain of McIntosh, patented in 1984 by Chick Orchard, of Monmouth, Maine. The tree was discovered as a whole-tree sport in a Rogers McIntosh orchard, planted in 1967 on seedling rootstock. Scion wood from this tree was top-worked onto McIntosh seedling bodystocks in 1980 and the spur-type habit was seen to persist after grafting. Budded trees on seedling, M7, and MM111 rootstocks were planted at Chick Orchards in 1982 and at the Maine Agricultural Experiment Station farm (Highmoor) in 1984 for evaluation.

The 'Chick-A-Dee McIntosh' tree is compact on seedling rootstock, is very spurry in growth habit, and has wider crotch angles than 'Rogers McIntosh'. The tree is very slow growing and has needed little or no pruning, due to its horizontal branching habit. The original tree is about half the size of adjacent 'Rogers McIntosh' trees of the same age. There are no data yet on precocity, yield, or fruit characteristics, but no differences have been noted from 'Rogers McIntosh'.

Exclusive propagation rights have been granted to Roaring Brook Nursery, Monmouth, Maine. The patent description of the original tree was written by James F. Anderson, Department of Plant and Soil Science, University of Massachusetts and is quoted here:

"Shoots: Medium to rather long, medium in thickness, with medium internodes. Bark-bright reddish-reddish olive. Lenticels-medium in number, small, roundish yellowish gray, slightly raised.

Leaves: Petiole-short and rather stout. Blade-large, flat or slightly folded near margin, straight not waved, broad-oval, often cordate at base, spreading rather coarse and thick with considerable pubescence. Serrations-dull, medium in size, quite regular, shallow not very distinct. Surface-rather dull, rather rough with medium pubescence, dark green."

¹ Assistant Professor of Pomology, Department of Plant and Soil Sciences, University of Maine, Orono, Maine 04469.

U.S. POSTAL SERVICE STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION

Fruit Varieties Journal is owned and published by the American Pomological Society, with publication and business offices located at: 103 Tyson Building, University Park, PA 16802. Frequency of issue: quarterly. Publication number: 0091-3642. Annual subscription price: \$12.00. Editor: David C. Ferree, Dept. Horticulture, OARDC, Wooster, Ohio 44691. Business Manager: L. D. Tukey, 103 Tyson Building, University Park, PA 16802.

The average number of copies of each issue printed during the preceding 12 months was 1,100; total paid circulation, 886; total distribution, 886; office use and left over, 214. The actual number of copies of a single issue published nearest to filing date was 1,100; total paid circulation, 920; total distribution, 920; office use and left over, 180.

I certify that the statements made by me above are correct and complete. L. D. Tukey, Business Manager. September 19, 1985.
