

FRUIT GARDENS

Fruit Gardens Committee Appointed

By Stanley Johnston, *President,*
American Pomological Society

Membership of the new Fruit Gardens Committee has been completed and the committee is getting organized and planning its work.

Dr. W. F. Pickett, Head of the Department of Horticulture, Kansas State College, Manhattan, Kansas, will be chairman of the committee. Dr. Pickett is a professional horticulturist of wide experience and is very well qualified to lead this new activity of the American Pomological Society.

Two fruit hobbyists are included in the membership of the committee — Richard M. Fagley of New York, and R. G. Anderson of Kansas City, Missouri. Mr. Fagley is a graduate of Harvard in religious education and is assistant to John Foster Dulles, who is a member of the United Nations Commission. Mr. Fagley is now on duty in England

and in his spare moments hopes to visit places of horticultural interest there.

Mr. Anderson is a very successful business man who has a collection of rare fruit varieties and gets a great deal of enjoyment from this hobby.

Cecil Clark is an outstanding commercial fruit grower of the state of Washington. He has made many friends at the National Peach Council meetings and in other horticultural organizations. While his chief interest in horticulture is in the commercial field, he sees great possibilities in growing fruit plants as a hobby.

Completing the personnel of a very well-balanced committee is J. C. McDaniel, State Horticulturist of Tennessee. Mr. McDaniel has had a broad experience in the horticultural field working with fruit growers, nurserymen and others interested in fruit growing.

At present, the members of the Fruit

Gardens Committee are exchanging ideas and it is expected that they will have a definite plan of action outlined by the time of the 100th Anniversary Meeting

of the American Pomological Society, which is to be held at the Hotel Jefferson in St. Louis, Missouri, Feb. 17, 18, 19, 1948

VARIETIES OF FRUIT SUITABLE FOR CULTIVATION IN IRELAND

Anonymous, 1946.

Ireland Dept. of Agr. Leaflet 64. 12 pgs.

It is of interest to note the varieties being recommended for another country and observe how they compare with the situation in our own land. Certain comments in the introduction of this leaflet are worthy of quotation since they give a picture of the general status of the fruit industry in Ireland.

"The Department takes the opportunity of urging upon every person who owns land the desirability of devoting some portion of it to fruit-growing. It has been conclusively demonstrated that fruit—particularly apples and soft fruits—of excellent quality can be profitably grown in Ireland. The value of fruit as an article of diet, either raw or cooked, is not sufficiently recognized, and there are very few holdings on which fruit of some kind cannot be grown at least for home consumption."

"Commercial fruit growing can be recommended with the greatest confidence, provided the plantations are properly managed and care is taken in grading and packing the fruit for market."

Recommended Varieties

This leaflet includes short descriptions of 42 apples, 21 pears, 18 plums, 8 cherries, 11 gooseberries, 13 currants, 4 red raspberries, and 2 strawberries. The brief comments include information on the characteristics of the fruit and its uses, general adaptation of the variety, blooming period and notes on the type and growth of the plant.

Few American Varieties Cited

The lists in this circular contain few varieties which are found in the United States. Of the 42 apples only Mother, Tompkins King, and Wealthy are found commonly in this country. A larger proportion of the pears are familiar to American growers. These include Comice, Clapp Favorite, Conference and Laxton's Superb. The cherry list includes Early Rivers, May Duke, and Napoleon.

A unique situation is found in the case of strawberries. The authors state, "Healthy stocks of many of the strawberry varieties formerly cultivated are now difficult to procure. Royal Sovereign and Huxley are the only varieties now giving satisfactory returns under commercial conditions." This is quite different from the relatively long list of strawberry varieties offered by nurseries in this country.
